Mustard greens turn yellow when something stops them from making green color, called chlorophyll. This happens due to lack of food in the soil, too much or too little water, pests, or old age. Hot weather can also make the plant shift energy to make yellow flowers instead of green leaves. YouTube · GreenTGarden +3

Common Causes of Yellow Mustard Greens

- **Low Nutrients:** Soil lacks nitrogen, causing leaves to fade.
- **Water Stress:** Too much water rots roots, or too little water starves the plant.
- **Pests:** Tiny bugs like aphids suck plant juices.
- **Diseases:** Fungal issues like downy mildew or powdery mildew cause spots and yellow color.
- **Bolting (Heat):** Warm weather makes the plant flower and turn bitter.
- **Old Age:** Lower, older leaves naturally turn yellow and die off. YouTube · GreenTGarden +10
